Project Report

Name: - Rishita

Reg. No.: - 25BSA10096

Branch: - Cloud Computing And Automation

Year: - 2025-2029

Course Code: - CSE0001

Date: - 26 March 2026

Introduction

This Digital Literacy Project was completed as part of the CSE0001 course. As a Student Digital Ambassador, the goal was to build awareness about digital tools, online communication, and cybersecurity among peers. The project consists of five tasks that focus on practical skills such as creating digital content, building a professional online presence, exploring coding platforms, writing professional emails, and understanding cybercrime. Through this project, I gained hands-on experience with various digital platforms and developed a better understanding of responsible online behaviour.

Task 1: Digital Literacy Infographic

For this task, I created a digital literacy infographic using Canva. The infographic covered important topics such as safe internet practices, professional online presence, and useful digital tools for students. I focused on making the design visually appealing and easy to understand. One challenge I faced was organizing all the information within a single page while maintaining clarity. However, this task helped me improve my creativity and design skills, and I learned how to communicate information effectively through visuals

Task 2: Digital Portfolio

In this task, I created and updated my profiles on GitHub and LinkedIn. GitHub is useful for showcasing projects and learning version

control, while LinkedIn helps in building a professional network. I completed my profile details and ensured they looked professional. In the future, I plan to regularly update these platforms with my projects, achievements, and skills. This will help me build a strong digital presence and improve my career opportunities.

Task 3: Platforms Exploration

For this task, I used HackerRank to complete a beginner coding challenge, which helped me practice basic problem-solving skills. I also created a Google Form to design a digital literacy awareness quiz. This included multiple-choice and short-answer questions. These tools are very useful for academic learning as they improve logical thinking and collaboration. This task helped me understand how online platforms can be used effectively for both learning and sharing knowledge.

Task 4: Email Etiquette

In this task, I learned how to write professional emails and understood the importance of proper communication. A situation where poor communication can cause problems is when a student sends an informal or unclear email to a professor. This may create a negative impression. By using a proper subject line, respectful tone, and clear structure, such issues can be avoided. This task improved my confidence in writing formal emails.

Task 5: Cybercrime Awareness

While researching ransomware, I was surprised to learn how easily systems can be affected through simple phishing emails. Many users unknowingly click on malicious links, leading to serious consequences. One

habit I will change is being more cautious while opening emails, especially from unknown sources, and always verifying links before clicking. This will help me stay safer online.

Conclusion

This project helped me develop essential digital literacy skills, including online communication, cybersecurity awareness, and professional profile building. It provided practical knowledge that will be useful throughout my academic and professional journey. Overall, the project enhanced my confidence in using digital tools responsibly.
